## PROFILE

Backend engineer with **1 year and a half of production experience** building AI-powered SaaS at scale — specialising in **NestJS microservices**, social data ingestion pipelines, and **NLP service integration on GCP**. Proven ability to ship from early prototype to production in a cross-functional Agile team, with hands-on experience across the full JavaScript stack and Python backend services.

## WORK EXPERIENCE

Backend Engineer

**Euklydia** — deepsocial.fr · euklydia.com

📅 June 2024 – Present 📍 Tunis, TN

- Built and maintained the core **NestJS** backend powering DeepSocial, an AI-driven social media intelligence platform serving **6 brand clients**, ingesting **~5k posts/month** across **4 platforms**
- Designed and implemented **multi-platform social data ingestion pipelines**, collecting and normalising posts, comments, and engagement metrics from heterogeneous third-party APIs into a unified data model
- Integrated a **Python/FastAPI emotion-detection microservice** into the Node.js backend via internal REST calls, enabling per-post emotional scoring (positive / neutral / negative) at scale across all ingested social content
- Modelled and versioned **PostgreSQL** schemas for social posts, sentiment scores, and analytics aggregates; optimised slow analytical queries and **reduced dashboard load times by ~35–40%** through targeted query rewrites and indexing
- Containerised all backend services with **Docker** and deployed to **GCP (Cloud Run)**, managing environment configs across development, staging, and production
- Wrote **Jest unit and integration tests** for ingestion handlers and sentiment pipeline endpoints, maintaining **95%+ test coverage** across all critical data paths
- Collaborated directly with the AI team to iterate on NLP model outputs and with the Frontend team to design and version the **REST API contract** consumed by the Next.js client
- Contributed to the public-facing website ([euklydia.com](https://euklydia.com)), demonstrating full-stack capability beyond the core product

Full-Stack JavaScript Intern

**Euklydia**

📅 January 2024 – June 2024 📍 Remote

- Developed full-stack features across the early DeepSocial

## EDUCATION

Software Engineering (B.Eng.)

**ESPRIT**

📅 Sept 2021 – June 2024

📍 Tunis, TN

Computer Science (DUT)

**ISSET Nabeul**

📅 Sept 2019 – June 2021

📍 Nabeul, TN

## SKILLS

**Languages:** TypeScript, JavaScript, Python

**Backend:** Node.js, NestJS, FastAPI, REST API Design

**Architecture:** Microservices, Data Pipelines

**Frontend:** React.js, Next.js

**Databases:** PostgreSQL, MongoDB, Redis

**DevOps:** Docker, GCP (Cloud Run, GCS)

**Testing:** Jest, Unit & Integration Testing

**Practices:** Git, Agile/Scrum, SOLID

## LANGUAGES

- Arabic — Native
- English — Fluent
- French — Professional

## LIVE PROJECTS

**DeepSocial**

AI-powered social media intelligence SaaS. Built the backend from early prototype to

prototype using **React** (frontend) and **Node.js / Express** (backend), following REST conventions and SOLID design principles

- Wrote **Jest tests** covering UI components, API route handlers, and database interactions, establishing a testing baseline before production launch
- Investigated and resolved production bugs as Tier-2 support, tracing issues across service logs and applying targeted data fixes with minimal downtime
- Authored technical specifications and third-party integration documentation, accelerating new engineer onboarding and reducing ramp-up friction

production launch. Sole backend engineer across the full development lifecycle.
